Process for Developing CHIP

Local Public Health System

Public health systems are commonly defined as “all public, private, and voluntary entities that contribute to the delivery of essential public health services within a jurisdiction.” This concept ensures that all entities’ contributions to the health and well-being of the community or state are recognized in assessing the provision of public health services.

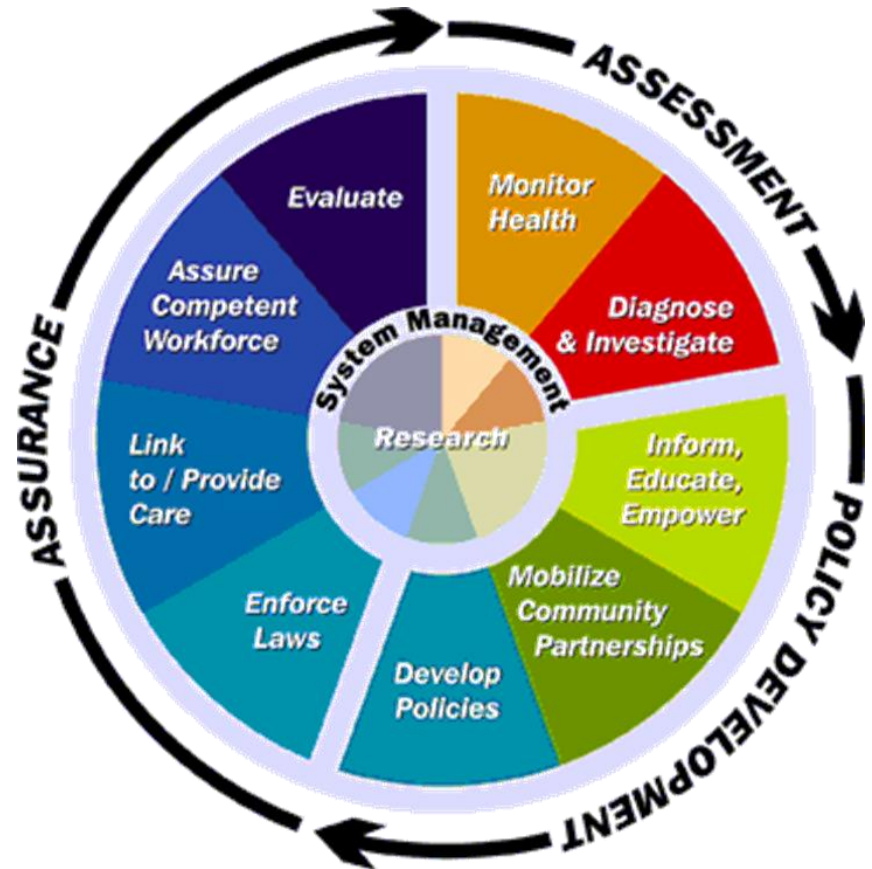

Centers for Disease Control and Prevention

Local Public Health System

10 Essential Public Health Services

Describe the public health activities that all communities should undertake.

10 Essential Public Health Services

1. Monitor health status to identify and solve community health problems
2. Diagnose and investigate health problems and health hazards in the community
3. Inform, educate, and empower people about health issues
4. Mobilize community partnerships and action to identify and solve health problems
5. Develop policies and plans that support individual and community health efforts

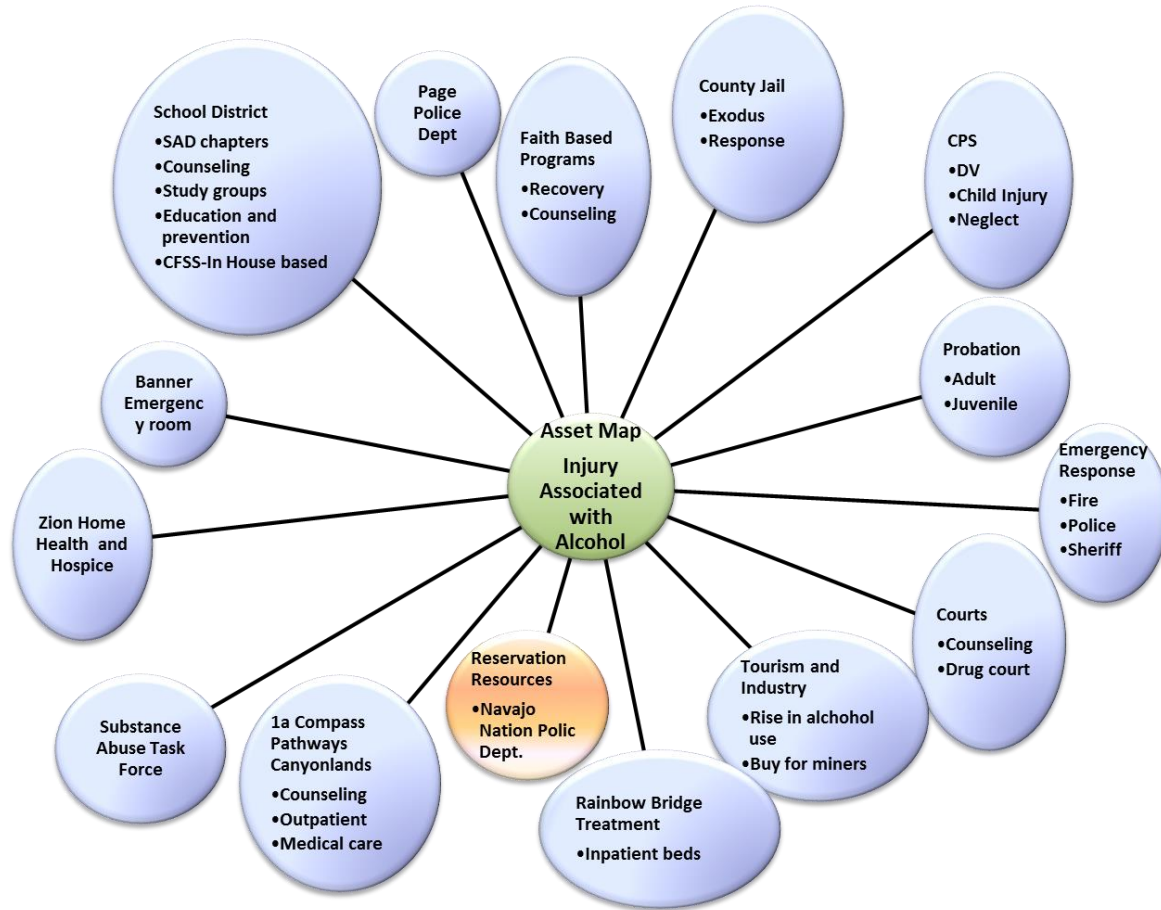

10 Essential Public Health Services

6. Enforce laws and regulations that protect health and ensure safety.
7. Link people to needed personal health services and assure the provision of health care when otherwise unavailable.
8. Assure competent public and personal health care workforce.
9. Evaluate effectiveness, accessibility, and quality of personal and population-based health services.
10. Research for new insights and innovative solutions to health problems.

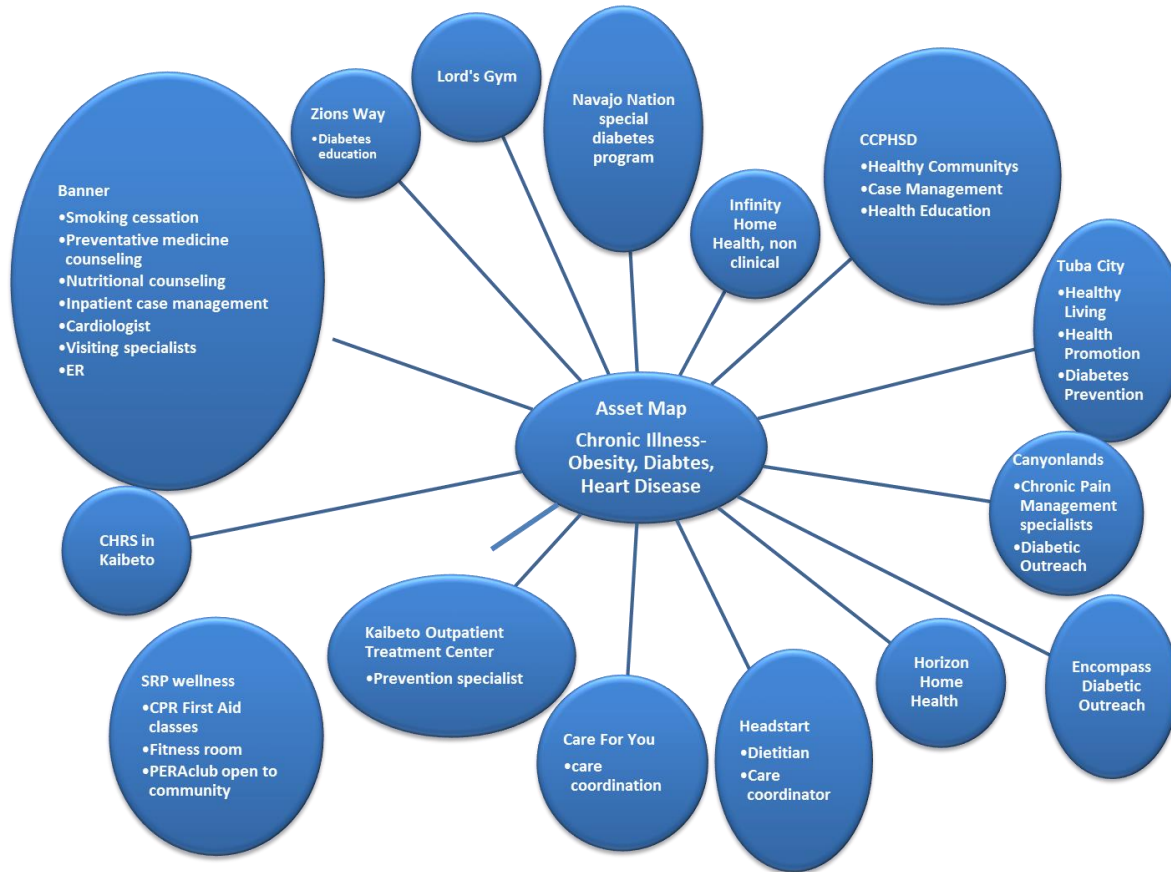

Components of the CHIP

- **Brief Overview of Assets, Gaps, Strategies**
 - Injury Associated with Alcohol
 - Chronic Illness including Health Disease, Diabetes, Obesity
 - Access to Care
