

Disease	Culture	Molecular	Serology	Other
Rickettsial Panel			Pair-7	
RSV	Throat, N/P-14		Pair-5	
Rubella			Single, Pair-2 to 4	
Salmonella	Stool-7	PFGE-5		Serotype
SARS		PCR-5	Single-7	
Shigella	Stool-7	PFGE-5		Serotype
Staph. Aureus (MRSA, VRSA, VISA & Staph. Enterotoxin B)	Sterile site-7			Drug Suscept./ Stool, vomit toxin testing
Streptococcus	Sterile site-7	PFGE-5		
Syphilis			Serum, CSF-1	Darkfield available at CCHD
Taenia Infection-Cystercercosis				O&P-1
Toxoplasma			Single-7	
Trichinella				Muscle biopsy-1
Tularemia	Any fluid/tissue-7	PCR-2		
VRE	Any specimen-7	PFGE-5		
Varicella Zoster	Vesicle fluid-21		Single, Pair-7	
Vibrio spp.	Stool-7			Serotype
West Nile Virus			Single-7	
Yersinia pestis (Plague)	Any fluid or tissue-7	PFGE-5		
Yersinia spp.	Stool-7			

Services to Health Care Providers

Testing

- The blue listing of diseases in this folder is a list of the tests that are available to private medical providers from the Coconino County Health Department, through the Arizona State Laboratory. The numbers after the test are the turn around times, in days, for results. The names in red are reportable diseases. N/P stands for nasopharyngeal swab.

- The Arizona State Laboratory also serves as a reference microbiology laboratory to hospital and independent clinical laboratories in order to confirm their results from cultures and clinical specimens.

Treatment

- The CCHD Communicable Disease Program can provide Tuberculosis (TB), Sexually Transmitted Diseases (STD) and HIV treatments to those infected. Treatment and/or vaccination will be offered for those diseases that require an intervention for people exposed.

Contact Tracing

- The CCHD Communicable Disease Program will interview people to determine common exposures that might suggest the source of contact with the particular disease.

Information

- CCHD sends out information to all general medical practitioners and emergency departments about communicable disease outbreaks within the county.
